

FM Radio Coverage on 97.2FM

Gravity FM is a community radio station licensed by Ofcom to broadcast on 97.2FM from our transmitter in Grantham, Lincolnshire, UK. We are often asked how large our FM radio coverage is or where can we receive your station on the radio. The question unfortunately has no simple answer as the signal strength can be affected by many different factors including the weather. It can also make a difference to the FM radio coverage what type of radio equipment you are using to listen to us.

The best way to answer though is to use FM radio coverage maps. The first, provided courtesy of Ofcom, forms part of our license and is the area they consider should definitely be covered. In practice, this is a very conservative estimate and the signal travels much much further than indicated.

Grantham (Gravity FM) community radio coverage area - 27 November 2008
